

Completions Management

PARC Engineering specialises in managing, co-ordinating and administering project completion software and databases, which enables the tracking and reporting for the construction, pre-commissioning and commissioning phases of a project.

The completions management division of PARC Engineering complements the commissioning division by developing, implementing and updating completions software programs, therefore ensuring a systematic approach to project handover and completion.

PARC Engineering's management has extensive experience in managing the completions process of large scale energy and resources projects. Our Completions offering can work standalone or alongside our experienced commissioning teams to join and enhance a client's project team.

Mod Squads & Punch Listing

We provide dynamic, effective teams or individuals to assist with modifications and punch listing when projects are in their critical final stages. Our people meld seamlessly into owner operated teams or construction crews to assist in meeting tight schedule demands and ease the transition from construction to operations.
