

Engineering & Project Management

Our engineering services encompass both planning and execution. In the initial phases of a project we can work with clients to complete conceptual and pre-feasibility studies and develop fully costed and scheduled scopes of work. Our services extend into the construction phase, where we can mobilise on site as a key member of our client's engineering delivery team.

PARC Engineering supply Project Managers who have extensive experience in the infrastructure, minerals and mining, materials handling, oil and gas and power generation industries. Our Project Managers display strong leadership and focus on quality, time and cost.

Engineering

PARC Engineering's personnel have the capability and proven track record to undertake projects from the initial evaluation and study phase through to design, construction, commissioning and operational support.

Project Management

Our aim is to provide effective Project Management and Project Controls support to our customers, saving considerable time and money therefore improving the efficiency and success of their projects.
