

CHRISTMAS CREEK TAILS PIPELINE

Client

TCD is a civil construction company based in Australia and New Zeland, who specialise in underground services and infrastructure.

Project

TCD was contracted by FMG to install a tails line bypass around the coarse ore stockpile at their Christmas Creek operation. This included decommissioning of a defunct section of tails line and repurposing it for use in the bypass.

Challenge

Safely and efficiently decommission the defunct tails line. Visually inspect and perform UT testing on old piping. Pre-spool bypass piping prior to shutdown to minimise risk of schedule slippages. Tie into existing tails pipeline during a plant shutdown and expedite works to shutdown schedule.

Solution

PARC provided a team of Piping Fitters, a Supervisor and specialised tooling, to carry out the works on site at a moments notice. Our experience team systematically decommissioned the defunct tails line, then reinstated it on the bypass and completed the tie-in's.

Results

The scope was successfully completed on time and without incident.

-  Quality Delivery
-  Strong Leadership
-  Safe Execution
-  Integrity
